

I-80 ROTORS

Adapted from field-proven Hunter golf technology

KEY BENEFITS

Strong Planetary Gear Drive

The I-80 offers a super-strong planetary gear drive derived from our field-proven golf rotors. The robust internal gears provide years of trouble-free operation.

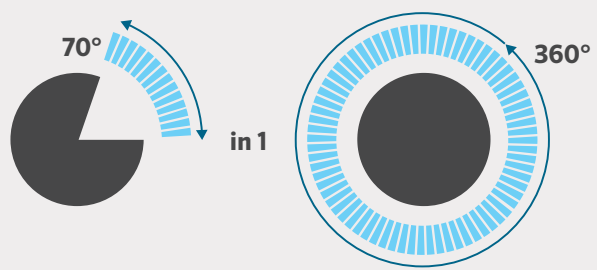

Total-Top-Service (TTS) Design

The I-80 rotor provides convenient no-dig servicing of the riser assembly or filter screen, preventing damage to the surrounding turf areas.

Complete Arc Adjustment

Adjust from 70° to a non-reversing 360° for flexibility across all landscapes and reduced inventory.

Rubber Cover or Turf Cup Options

With a small exposed surface area, the optional rubber cover and turf cup kits provide safety on the playing field.

Wide Flow Range Nozzles

A full line of colour-coded, triple-port nozzles are available for high-uniformity, long-range coverage. The nozzles are easy to identify, specify, and install.

IN THE FIELD

- 1 Issue:** I need a long-range rotor with a high flow rate.
Solution: With seven nozzle choices, the I-80 rotor provides a wide flow range that is ideal for parks and sports fields.
- 2 Issue:** Vandals occasionally damage my rotors.
Solution: The super-strong internal drive of the I-80 protects the housing from vandals and ensures the correct arc pattern.
- 3 Issue:** I am using a source where the water isn't always top quality.
Solution: The high-torque I-80 has an extra-strong planetary gear drive that powers through the toughest conditions.

IN THE DESIGN OFFICE

- Total-Top-Service I-80 rotors offer consistent performance in harsh environments. They are simple to service, providing a reliable solution for large sports fields (figure 1).
- Optional full-circle opposing nozzle I-80 models, along with optional rubber covers and turf cups, provide maximum water efficiency and safety.
- Tested in our ISO Certified Test Facility, ensuring a top-quality product for years to come.
