

1" I-SERIES ROTORS

The toughest, most durable selection for top performance in large turf applications

KEY BENEFITS

Automatic Arc Return and Non-Strippable Drive

The patented Automatic Arc Return feature and vandal-proof drive mechanism return the turret to the original arc regardless of where it is turned, ensuring water stays in the designated area while protecting the internal gears from damage.

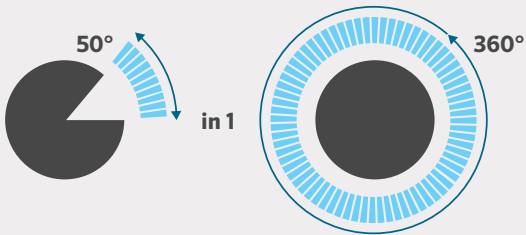

Extreme Durability

In sports field applications, the strong retraction spring and protective rubber cover help keep players safe in every application.

Complete Arc Adjustment

Adjust from 50° to a non-reversing 360° for flexibility across all landscapes and reduced inventory.

Dual-Port and Opposing Nozzles (I-25 and I-40)

Dual-port nozzles provide even coverage and optional full-circle nozzles offer maximum water efficiency.

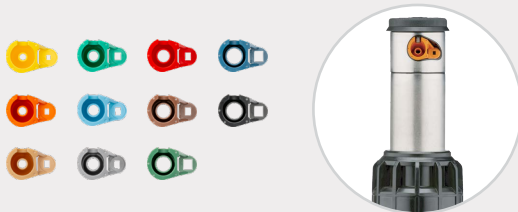

Full Line of Rotors

A series of rotors to fit all your needs.

High-Performance Nozzles

Color-coded nozzles utilize dual or triple ports to achieve top performance. The high-efficiency, contoured-front nozzles offer a wide flow range. They are easy to identify, specify, and install.

Hunter®

IN THE FIELD

- 1 Issue:** I need a big rotor with a low price.

Solution: The cost-effective 4" I-25 Rotor pop-up is an ideal long-range rotor optimized for use in parks and sports fields, with 11 nozzle choices across a wide flow range.

- 2 Issue:** I need a rotor that is built to thrive in extremely poor soil conditions.

Solution: Every I-40 Rotor has a robust stainless steel riser shaft to guard against tough environmental conditions. The stainless steel sleeve helps prevent riser seal leaks.

- 3 Issue:** The sprinklers I currently use sometimes stick up after the zone turns off.

Solution: The heavy-duty retraction spring on each I-40 Rotor is exceptionally strong, preventing hazardous stick-ups.

- 4 Issue:** I need a top quality rotor that I can use in all applications.

Solution: All Hunter rotors come with a wide selection of high-efficiency nozzles that can be quickly installed, and the arc of all rotors is fully adjustable to a full 360°.

IN THE DESIGN OFFICE

- On sports fields, the extra-thick rubber covers and small exposed surfaces of I-Series Rotors keep players safe.
- Stainless steel I-25 and I-40 Rotors offer maximum longevity with color-coded, high-efficiency nozzles across wide flow and radius ranges.¹
- Prevent puddling with a standard check valve and robust riser retraction spring — up to 10' in the I-25 and 15' in the I-40.²
- Choose a 6" tall pop-up model for your projects. The taller pop-up height will allow the nozzle to operate at its highest efficiency, and not be blocked by taller turf.³
- Purple rotor identification markers are available for reclaimed water applications.⁴
- Tested in our ISO Certified Test Facility, ensuring a top-quality product for years to come.
